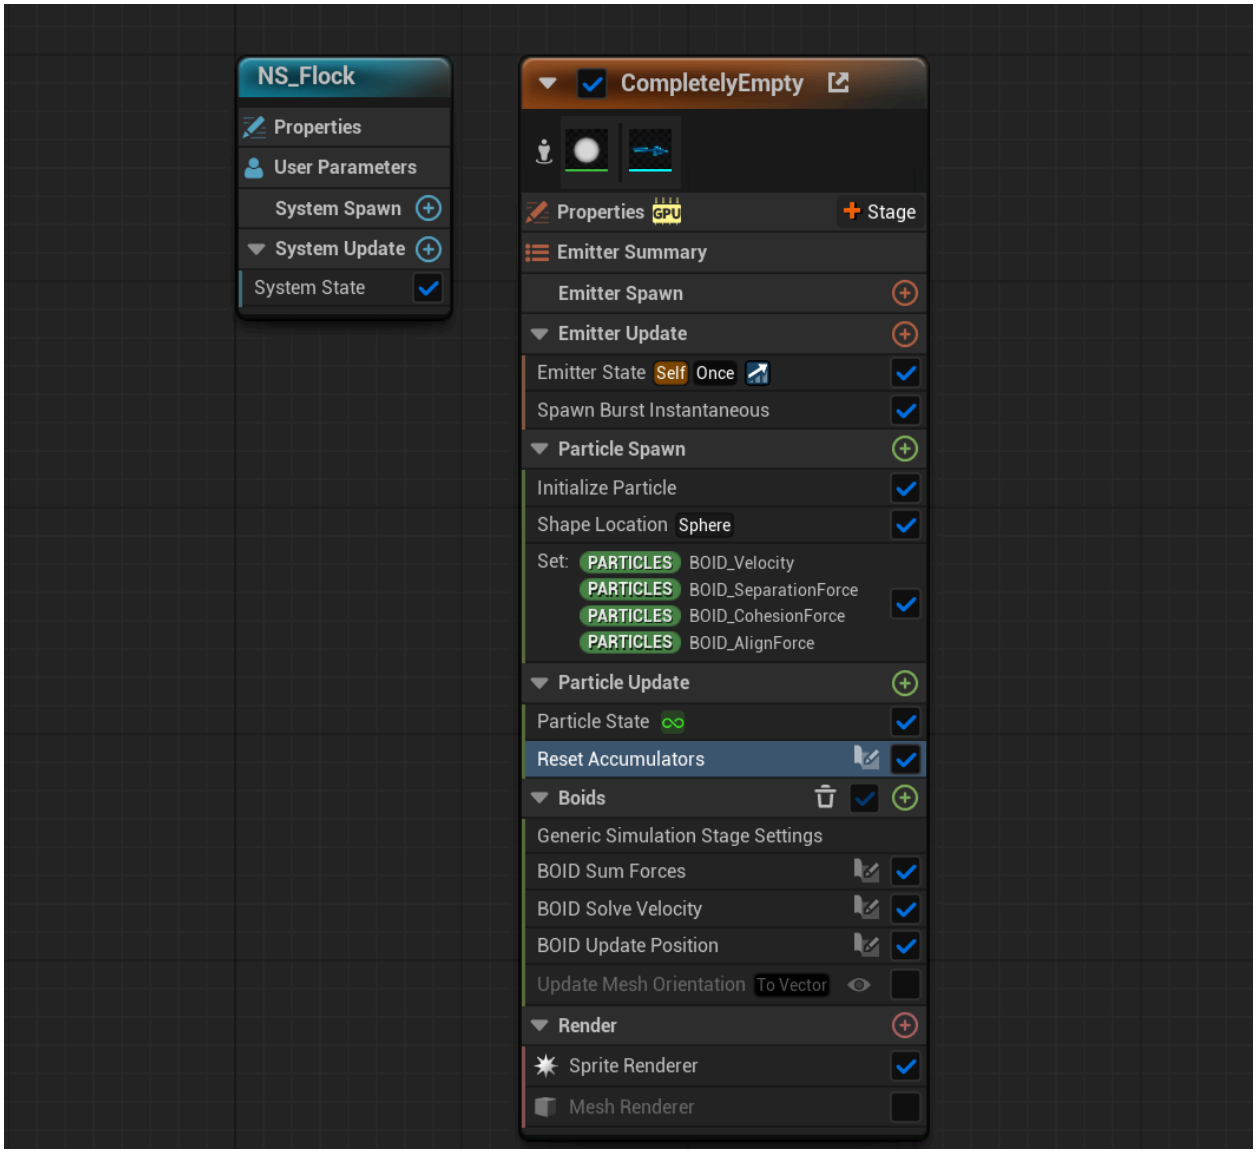
System and Emitter Blocks:



Parameters:
Italicized parameters are use dependent

System State:
- Loop: Once
- *Lifetime: 300*

Emitter Properties:
- Local Space: True
- Sim Target: GPUCompute Sim
- Calculate Bounds: Fixed
- Requires Persistent IDs: True

Emitter State:
- Loop Behavior: Once
- Loop Duration Mode: Fixed
- Loop Duration: *Same as System State Lifetime*

Spawn Burst Instantaneous:
- Spawn Count: *100*
- Spawn Time: 0.0

Initialize Particle:
- Point Attributes: *Style Dependent*
- Sprite Attributes:
  - Sprite Size Mode: Uniform
    - Uniform Sprite Size: *20.0*

Shape Location:
- Shape Primitive: *Sphere*
- Sphere Radius: *300*
- Sphere Distribution: Random

Particle State:
- Let Infinitely Lived Particles Die When Emitter Deactivates: True

Generic Simulation Stage Settings:
- Simulation Stage Name: *Boids*
- Iteration Source: Particles
- Num Iterations: 1
- Execute Behavior: Always

BOID Sum Forces:
- PersonalSpace: *50*
- ScanDistance: *300*

BOID Solve Velocity:
- Separation Weight: *1.0*
- Cohesion Weight: *2.0*
- Alignment Weight: *0.2*
- Centering Weight: *10.0*
- Particle Speed: *100.0*

Optional Parameters:
Update Mesh Orientation:
Orientation Method: Orient to Vector(s)
Facing Direction: **Particles** BOID_Velocity

Rendering:
Rendering is either with sprites or with meshes, the examples attached to this project use the default for the sprite renderer or the SM_FieldArrow for the mesh render. Do note though that this is entirely up to preference as well, other rendering solutions could also work.
